

## Industrial Network Systems

At Industrial Network Systems, we are dedicated to helping the industrial sector improve plant operations, reduce operating costs, establish reliability and increase agility, by deploying and supporting scalable factory information solutions that:

- Lower Costs
- Maximize Efficiencies
- Maximize Quality
- Comply with Legislation & Reporting
- Support Company Goals and Continuous Improvement Efforts

We specialize in and represent the GE Intelligent Platforms Proficy software suite, including *Proficy iFix, Historian, Plant Applications, Mobile, and Workflow*. We are experts at collecting data from the system (or even the device) level, bringing it together; and using analytical and visualization technologies to deliver the right data, to the right people, at the right time, on any device...transforming operational data into actionable information.

### To Learn More

Speak with one of our specialists today to find out how INS can help you leverage available technologies to transform your operational data into actionable information.

*Providing industrial intelligence solutions to customers for more than 20 years*

## Time to Modernize your Industrial Software

**Data Management  
& Analytics**

Efficiently collect, analyze, distribute and visualize large volumes of real-time and historical production data to optimize processes and for more informed decision making.

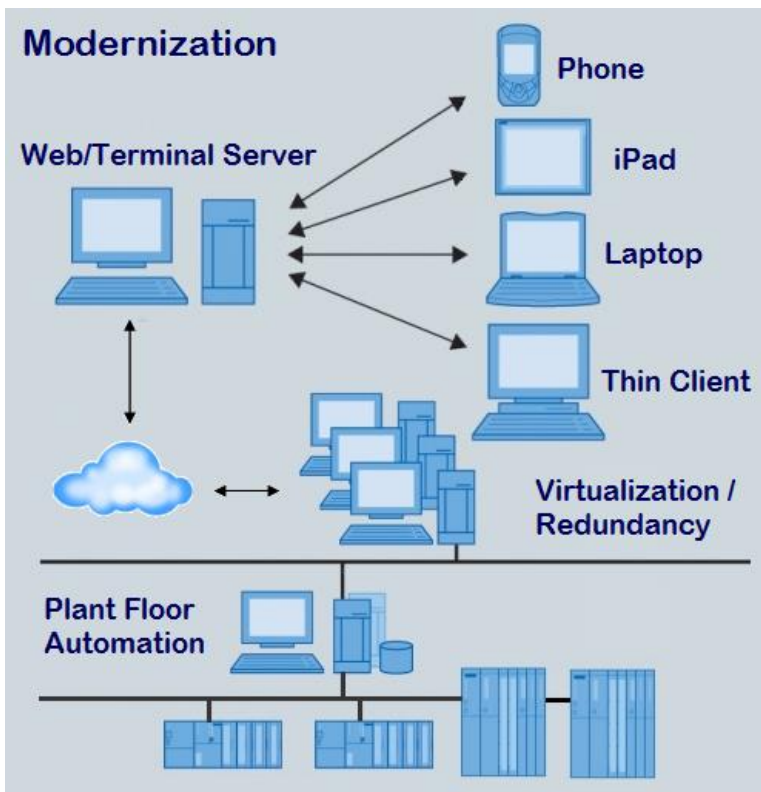

**Automation  
HMI/SCADA**

Effectively monitor and control your operations with advanced HMI/SCADA software. With real-time operational intelligence, you can stay ahead in today's connected world.

**Performance/Process  
Visualization**

Optimize your plant operations and empower your workers to do more with less. Ensure that best practices and lean processes become standard operating procedure.

# Modernization

**Upgrade your SCADA:** Older versions of *Proficy iFix* will cease to work reliably in 64 bit or on Windows 7 / 8 operating systems. Upgrade to the newest version to assure that reliability and to keep your total cost of ownership down.

**Add a Data Historian:** Extend your industrial data investment further by adding *Proficy Historian* and *Proficy Historian Analysis* to your architecture. Not only will you be able to complete more complex analysis and view key performance metrics; you will be taking the first step in transforming data into actionable information.

**Thin Down the Architecture:** SCADA system architectures that evolve over time, typically include a large number of plant floor PC's. That heavy architecture also has a high maintenance cost associated with it. Thin/Zero-deploy client solutions will lower those costs, while also increasing availability and adding redundancy.

### Specialists in GE Intelligent Platforms Proficy Suite

- Proficy iFix HMI/SCADA
- Proficy Mobile
- Proficy Historian
- Proficy Pulse
- Proficy Historian Analysis
- Proficy Workflow
- Proficy Plant Applications
- Proficy Advanced Alarming
